FYP B Final Paper Marking Rubric

Category	Weighting	0	N	P	C	D	HD
Background, context, literature review/state of the field	30%	*Not present or insufficient to assess*	**Relevance and Depth:** Insufficient background or context; relevance unclear. **Literature Coverage:** Inadequate review; key sources missing; no critical analysis. **Research Question:** Poorly defined or missing research question, hypothesis or problem statement.	**Relevance and Depth:** The paper provides some background information, but it may be superficial or lack depth. The context of the research is somewhat established. **Literature Coverage:** Basic review of relevant literature, but may miss key sources or include irrelevant ones. **Critical Analysis:** Minimal critical evaluation of existing research. Gaps and inconsistencies are not clearly identified. **Research Question:** The research question, hypothesis or problem statement is stated but may not be well-justified by the literature review.	*Exceeds all Acceptable criteria and meets some of the High Distinction criteria.*	*Exceeds all Acceptable criteria and meets most of the High Distinction criteria.*	**Relevance and Depth:** The paper provides a comprehensive and relevant background, clearly situating the research within the broader context of the field. **Literature Coverage:** Concise and relevant review of current and seminal literature, including grey literature where appropriate for R&D, Industry or Consulting projects, demonstrating an understanding of the key engineering concepts and principles underlying the research topic. **Critical Analysis:** Critical evaluation of existing research, identifying gaps, inconsistencies, and areas for further investigation. **Research Question:** Clearly defined research question, hypothesis or problem statement, well-justified by the literature review.

Scientific and Engineering content	50%	*Not present or insufficient to assess*	**Methodology:** Poorly described or incomplete; key aspects missing. **Data and Results:** Inadequate or unclear presentation; results overclaimed or not presented ethically. **Discussion:** Superficial or missing; fails to address bias and errors. Does not effectively connect findings to the problem or research question.	**Abstract, Introduction, and Conclusion:** The abstract, introduction, and conclusion are present but may be incomplete or lack clarity. The findings and their significance may not be well-articulated. **Methodology:** Methodology is described but may lack detail or clarity. Some aspects of the design, prototyping, or testing procedures may be incomplete or unclear. **Data and Results:** Reporting, analysis and interpretation of data and results is basic. Some results may be unclear or not fully explained. Results are presented honestly, with no overclaiming. **Discussion:** Discussion of results is present but may be superficial or incomplete. The paper reads like a list of results or a report rather than a high-quality paper. Limited discussion on how bias and errors have been addressed. Basic connection of the findings to the problem or research question. **Innovation and Originality:** The approach or outcomes may be conventional or show limited advancement beyond existing methods or solutions.	*Exceeds all Acceptable criteria and meets some of the High Distinction criteria.*	*Exceeds all Acceptable criteria and meets most of the High Distinction criteria.*	**Abstract, Introduction, and Conclusion:** The abstract succinctly summarises the research. The introduction effectively sets up the research question and context. The conclusion provides a clear summary of the findings and their significance. **Methodology:** Clearly described and appropriate methodology, can include design, prototyping, and testing procedures for R&D projects. The methodology demonstrates a comprehensive understanding of the processes, procedures, methods and materials used, and is written concisely and clearly with supporting figure(s) or tables. **Data and Results:** Comprehensive reporting, analysis and interpretation of data and results, including statistical analysis where applicable. Results are presented honestly, with no overclaiming. Claims made in writing are clearly supported by the data. Any project or experimental failures are addressed honestly and in such a way that another researcher could learn from your results. **Discussion:** Insightful discussion of results, including how bias and errors have been addressed. The results are put in context, i.e. specifically linked back to pre-existing work discussed in the literature review. The implications of the findings are well-articulated in relation to solving the problem or research question. Novel and important results are highlighted rather than simply listing measurements or restating what is already presented in the figures. Limitations of the research are discussed, and future directions may be recommended. **Innovation and Originality:** Demonstrates innovation and originality in approach, design, or findings.

Structure, figures and tables	10%	*Not present or insufficient to assess*	**Organisation:** Illogical or confusing structure; poor transitions between sections. **Figures and Tables:** Poor quality, missing, or not integrated; inconsistent labels. **Formatting Requirements:** Does not use the provided template. Exceeds 10 pages.	**Organisation:** The structure is generally logical but may have some inconsistencies or lack smooth transitions between sections. The paper uses the mandatory sections (Abstract, Introduction, Conclusion). **Figures and Tables:** Figures and tables are included but may be of lower quality or not well-integrated into the text. Labels and references may be inconsistent. **Formatting Requirements:** Uses the provided template, but there may be formatting inconsistencies.	*Exceeds all Acceptable criteria and meets some of the High Distinction criteria.*	*Exceeds all Acceptable criteria and meets most of the High Distinction criteria.*	**Organisation:** Logical and coherent structure, with a clear flow from abstract to conclusion. Each section transitions smoothly to the next. The paper uses the mandatory sections (Abstract, Introduction, Conclusion). **Figures and Tables:** Professional quality figures and tables that are well-integrated into the text. They effectively illustrate key points and are properly cross-referenced and described in the text, labelled and referenced where appropriate. **Formatting Requirements:** Strict adherence to the provided template, ensuring consistency in formatting and style.

Clarity and written expression	10%	*Not present or insufficient to assess*	**Clarity and Precision:** Unclear or confusing writing; technical terms misused. **Grammar and Syntax:** Frequent errors hindering understanding. **Referencing:** Inconsistent or incorrect style; sources improperly cited. Any use of AI in the project or the writing of the paper is not correctly acknowledged.	**Clarity and Precision:** Writing is generally understandable but may lack clarity or precision. Technical terms may not be well-defined. **Grammar and Syntax:** Grammar, punctuation, and syntax are generally correct but may have errors. The paper is understandable despite these issues. **Referencing:** Referencing style is used, but may be inconsistent or incorrect in places. Some sources may be missing or improperly cited. Any use of AI in the project or the writing of the paper is correctly acknowledged.	*Exceeds all Acceptable criteria and meets some of the High Distinction criteria.*	*Exceeds all Acceptable criteria and meets most of the High Distinction criteria.*	**Clarity and Precision:** Clear, precise, and concise writing. Technical terms are well-defined, and the language is accessible to the target audience. **Grammar and Syntax:** Excellent grammar, punctuation, and syntax. The paper is free from typographical errors. **Referencing:** Consistent and correct use of the chosen referencing style throughout the paper. All sources are appropriately cited. Any use of AI in the project or the writing of the paper is correctly acknowledged.
